

Citrix Presentation Server 4.5 and XenApp 5.0 for Windows Server 2003: Administration training

Version update

In an effort to improve course quality, the Citrix Presentation Server 4.5 and XenApp 5.0 for Windows Server 2003: Administration course has been updated to a new version: *CTX-1259CI*. In this update, the courseware has been streamlined and revised to include current XenApp 5 for Windows Server 2003 content and terminology.

Key Changes

Below is a description of the key changes from version *CTX-1259BI* to version *CTX-1259CI*.

- One seamless course: The addendum used in the previous version of the course is now incorporated into the course content, providing a seamless, 5-day ILT offering.
- Installation Media and Terminology: XenApp 5 *Feature Pack 2* is installed through a new product DVD, which will be included in the manuals as usual. The XenApp 5 management consoles are now closely aligned across Windows Server 2003 and 2008 platforms. Terminology within the course will be updated to match the new product interface.
- Procedures and Labs: All procedures will be updated to match the new interface. New labs, which showcase product features that were introduced or enhanced after the 2007 release of *CTX-1259AI*, will be incorporated into the course. These labs will run on the same Virtual PC images as those for *CTX-1259BI*. However, the Classroom Setup Guide and lab resources will be updated on My Citrix.
- New XenApp Features: New features introduced in *Feature Pack 2*, including *VM Hosted Apps*, *Power and Capacity Management* and new *HDX technologies* will be addressed in *CTX-1259CI*. There will be no labs on these features.
